Get ready 3

On your PC 4

Pair Cody 5

Every day 6

Page numbers refer to this PDF. Earlier page references in historical notes retain their original edition numbering.

Your quieter sidekick.

Four small steps from first setup to everyday use.

BEFORE YOU START

A Windows PC with Codex and its command-line app.

Python available on the PC.

1 Connect Cody to Wi-Fi

Follow the Wi-Fi setup shown on Cody. Keep Cody and your PC on the same reachable local network.

2 Keep your PC nearby

Open Codex on the PC you want Cody to remember. You will enter the code from Cody in a chat.

Already set up?

If CCP is already enabled in Codex, skip to page 3. Pairing uses your local network; it does not need public Internet.

Enable Cody in Codex.

CCP is Cody's Codex Plugin. Install it once.

1 Add the local plugin source

Open Terminal in the Cody repository folder supplied with your setup. Run this one command:

```
codex plugin marketplace add .
```

2 Install and enable CCP

Restart Codex. Open Plugins, find Cody local plugins, then install and enable CCP - Cody's Codex Plugin.

3 Allow its activity hooks

In a local Codex session, open /hooks. Review and approve the CCP hooks. They let Cody show what your chat is doing.

If Windows asks about the network

Allow Python on Private networks only. Use your home or trusted office network, rather than a public or guest Wi-Fi.

One code. Your PC.

Use the live code on the Cody you are holding.

1 Open Connect Codex

Finish Wi-Fi setup and choose Connect Codex. To open Setup later, hold the still character for 1.5 seconds, then release.

2 Read the six-character code

Keep the code visible on Cody. In a new Codex chat with CCP enabled, ask:

> **"Discover my Cody and pair it using this code: ..."**

Replace ... with the code on Cody.

3 Wait for confirmation

Wait for You're all set on Cody, then tap Let's go. Cody looks for your PC straight away. Connected means it has found CCP.

If Cody already remembers a PC

Choose Keep link to reconnect. Use Pair again only when you intend to replace it. A temporary disconnection needs no new code.

Back to what matters.

Keep Codex running. Let Cody bring you the useful bits.

1 Start a chat in Codex

Send a message in your chat. Cody follows the chat you most recently messaged and shows its current activity.

2 Read, choose, then send

For a question on Cody, tap Open, read the choices and review your selection. Tap Send to answer. Reply sent confirms delivery.

3 Make it yours in the chat

Try "Call me Alex", "Set quiet hours from 22:00 to 07:00", or "Disable quiet hours". Your choice keeps the other settings.

YOUR SCHEDULE. YOUR CHOICE.

Quiet hours are optional. Ask Codex to check Cody's timezone before you set a schedule.

Not connecting?

Keep CCP enabled and both devices on the same private network. If a pairing code expires, use the new code shown on Cody. If Cody is connected but idle, send a new chat message and check /hooks.

Approvals requested by Codex are answered on your PC.
