CODY / VIBEWARE

Manga Status Atlas

Preserved character artwork and current Studio/design boundaries.

DEVELOPMENT REFERENCE / 09 November 2026

Umberto Giacobbi / umbertogiacobbi.biz / Copyright (c) 2026

Current behavior and limitations. Original correction dates and screen IDs remain in the final register.

Contents

Use screen IDs for product identity; PDF page numbers are navigation only.

Current scope	3
Expressive cue identities	4
Pearl Mist concept	5
Aurora Veil concept	6
Cosmic Stardust concept	7
Enchanted Mosaic concept	8
Expression and motion	9
Corrections register	10

Character design without invented device facts

Current repository source is the reference. Firmware execution, physical behavior and the private cloud service require their own verification. The device-first image presents a dashboard. Character artwork belongs to Studio/design work. Cloud firmware integration is deferred.

Keep the character vocabulary

Preserve stable identities, original artwork and internal animation channels. C01-C14 and IS01-IS04 are documentation labels; they do not become storage indices or new screen routes.

Device facts

Battery, charging, Wi-Fi, clock and system metrics need valid canonical observations. Missing, failed or stale samples remain explicit. Artwork never supplies a measured value.

Studio

Character expression, cue and material references support native authoring/preview work. Synthetic Windows input is labeled and must not enter firmware snapshots. A preview is not a device capture.

Current firmware

The default device-first composition presents statistics, connection controls and Options. It excludes character presentation; its current navigation and limits are in the Navigation Atlas.

Sources: docs/cody/navigation.md, layout.md, runtime.md; plugins/cody-codex-plugin/README.md and protocol/CCP1.md.

Fourteen expressive cues, explicit meanings

C01-C14 remain document labels. Runtime identities use stable typed names; artwork does not create a measurement.

C01 / Sleep

C02 / Fear

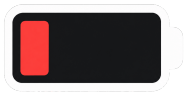
C03 / Joy

C04 / Hunger

C05 / Thirst

C06 / Heat

C07 / Cold



C08 / Low Battery

C09 / Charging

C10 / No Wifi

C11 / Curiosity

C12 / Confusion

C13 / Affection

C14 / Frustration

Battery, charging, Wi-Fi and temperature meanings require a valid canonical observation. Artistic hunger/thirst/emotion cues are not sensor values. The device-first image omits character presentation; these assets remain Studio/design references.

Pearl Mist / original concept

Studio concept artwork. These expressions and materials are not the device-first dashboard.

Original Manga pages 05-06 / prior PDF pages 07-08. Existing embedded image retained without editing. Concept labels are not measurements or physical-device evidence.

Aurora Veil / original concept

Studio concept artwork. These expressions and materials are not the device-first dashboard.

Original Manga pages 07-08 / prior PDF pages 09-10. Existing embedded image retained without editing. Concept labels are not measurements or physical-device evidence.

Cosmic Stardust / original concept

Studio concept artwork. These expressions and materials are not the device-first dashboard.

Original Manga pages 09-10 / prior PDF pages 11-12. Existing embedded image retained without editing. Concept labels are not measurements or physical-device evidence.

Enchanted Mosaic / original concept

Studio concept artwork. These expressions and materials are not the device-first dashboard.

Original Manga pages 11-12 / prior PDF pages 13-14. Existing embedded image retained without editing. Concept labels are not measurements or physical-device evidence.

Motion remains artistic and interruptible

Studio/source contracts; no respiratory, emotional or device measurements are inferred.

One composition

Breathing, gaze, blink, mouth and artistic accents compose under their current owner. An expression does not change a route or imply a real task outcome.

Real events

Reply/interruption accents require matching chat/turn identity and coherent activity. Repeated frames, hidden routes and source gaps cannot manufacture a completion gesture.

Interaction

Caress and eye contact use acquired touch with stable identity and bounded timing. Standby, setup, question and diagnostics retain priority. Do not add consumer-side hardware reads.

Sound

Only admitted, actually visible semantic events request their optional cue. Busy, hidden, expired or muted events do not replay later. Device-first notification sounds have their own model and policy.

Sources: docs/cody/navigation.md, layout.md, runtime.md; plugins/cody-codex-plugin/README.md and protocol/CCP1.md.

Corrections register

Retained corrections and evidence; original dates, page references and screen IDs remain explicit.

DATE / TYPE	REVISION DETAILS AND SUPPORTING MATERIAL
05 October 2026 **ERRATA**	**Idle scenes and visible breathing** Affected: Manga originals 03-04, 14-18; Navigation originals 02, 06, 10-12 and 19; screens 04, 16, 35A/35B, 36-38. IS01 Breathing, IS02 Yawn, IS03 Whistle and IS04 Greeting are transient artistic accents within original Idle 16. The 20-40-second eligible wait, 3.2-second gesture and 40-second cooldown replaced a fixed yawn trigger; immediate repeats are excluded. The original 35% closing, 16-22% reopening and 4.5% width pulse were superseded by the 06 October correction. Evidence / limits: Source/design evidence only; physical behavior was not established by this correction.
06 October 2026 **ERRATA**	**Mouth, cues, caress and whistle** Affected: Manga originals 03-04, 14-15, 19-24; Navigation original 23; Idle 16 and Sleep 35A. Correct the artistic mouth pulse to 75% closing, 16-24% reopening and 18% width motion, with Stressed peak opening 0.24. The retained cue correction used +30 px right/+40 px down, 3.6x scale and 400-ms fades; Micro excludes cues. Moving caress, eye responses and one fresh-press click use existing owners. Whistle minimum width is 0.5, replacing invalid 0.42, with one 300-ms sound attempt. These are design/source values, not measured physiology. Evidence / limits: The retained illustrations were Windows rig compositions. No physical visual or acoustic observation was claimed for this correction; build/check chronology is omitted.

Corrections register

Retained corrections and evidence; original dates, page references and screen IDs remain explicit.

DATE / TYPE	REVISION DETAILS AND SUPPORTING MATERIAL
06 October 2026 **ERRATA**	**VibeWare identity before device content** Affected: Manga originals 02, 14, 24-27; Navigation originals 02, 20, 22-23 and 26; B01/B02; screens 01-05, 16, 35A/35B. The owner-supplied floppy artwork becomes the cold-boot/software-reset introduction. Preserve its 42 authored frames and 80/90-ms frame dwell, totaling 3.5 seconds. Ordinary standby/deep-sleep wake is separate. The former 256 x 292/twofold composition and character phase diagram were later superseded; the approved artwork remains. Evidence / limits: Supplied original GIF and source integration; no physical appearance or timing measurement was established by this correction.
10 October 2026 **ERRATA**	**Current screens replace superseded appendices** Affected: Manga original 02 and 28-31; branding 01-03, Wi-Fi 04-09/42, preferences 10/36/11, Codex 12-15/40/41. The correction introduced the title/subtitle with 192 x 219 boot artwork at (137,164), explicit saved-state routes, code preparation and confirmed settings persistence. The current source now uses the device-first dashboard and BOOT Options, so the former character-hold setup and skin journey are design references only. Source schematics never represent device captures. Evidence / limits: Source/design evidence only; physical behavior was not established by this correction.
12 October 2026 **CHANGE**	**Navigable document identity** Affected: All original Manga pages; prior final register. Retain coordinated document identity and navigable contents, preserving original artwork and screen references when pagination changes. Evidence / limits: Document authoring and layout review only.

Corrections register

Retained corrections and evidence; original dates, page references and screen IDs remain explicit.

DATE / TYPE	REVISION DETAILS AND SUPPORTING MATERIAL
09 November 2026 **ERRATA**	**Character assets are Studio/design material** Affected: Former Manga PDF pages 03-34; original cue plates 03-14; IS01-IS04 and B01/B02. The current device-first image omits the character renderer. Keep the four original material sheets and expression sheet without editing their embedded image bytes, and retain C01-C14 meanings. Remove superseded route appendices and code/build history from the body. Current measured device behavior belongs to the Navigation and Communication references. Evidence / limits: PDF authoring only. No simulator or physical character performance was executed.
